

**How to import/export QTX files in Datacolor Tools?**

Make sure you add a button in your system for Import/Export Desktop. To do so, select System menu, Edit Button Bars, click Command radio button, and select Import Desktop or Export Desktop from right dropdown list. Then, click *Add*.

A dialog box will allow the user to select the name and the destination of the file to be exported. When a file is imported into Datacolor TOOLS using the proper format, the data is automatically added to the desktop.
