

**How would I know that I have achieved a good color separation?**

On both color separation methods, automatic and manual, the user can use the "Show Separation"™ option to enable a masking function that facilitate visualization of the color separation of each individual color.

In the masking mode, the user can adjust the border until there is a good separation between the colors. The border that separates the colors should be black. When the border is white it indicates uncertainty in the separation between colors
