

**Runtime error 429 active x component cannot create object when attempting to print a label**

This error occurs when the following DLLs are not properly registered: cpeaut32.dll, Crystl32.ocx and DCILabel.dll.

Simply re-installing the current version of Datacolor Paint or Paintmaker, followed by restarting the PC will usually solve the problem. If it does not, you will need to manually register these files located in the folder for Paintmaker - C:\PaintmkrCrystal directory using regsvr32.exe
