

Cannot load BPROP20.DLL

This error normally occurs in older versions of ColorTools where the path to DCI was not written in the AUTOEXEC.BAT or in recent versions of ColorTools when Datamatch is exited with error messages. ColorTools neither Datamatch will be able to login and the BPROP message will appear. Check the path DCI in Autoexec.bat file, or copy the file BPROP20.DLL directly from DCI directory into CLRTOOLS directory.
