

**How do I set up a dispenser software to software ?**

The two dispenser manufacturers that most frequently use this setup are Fluid Management/Colorpro and Corob. Find out which one you have. Have you installed the dispenser software on the same PC as Paintmaker (software to software) or do you have the dispenser software on a separate PC (computer to computer). Follow this procedure:

For Software to Software: Exit Paintmaker and any other application and place the installation CD for the current version of Paintmaker into the CD rom drive. When the CD autostarts, select *Change Active Dispenser*. Choose the appropriate manufacturer from the list, choosing either Harbil/Colorpro for the Fluid Management dispensers or Corob for the Corob dispensers. Then click Next. You will then select software to software from the next menu that appears. Click Next. Files will then be installed and when finished, you will be back at the Windows desktop. You should now be ready to dispense formulas.
