

I get an error "Not enough storage", when trying to measure a sample on my Datacolor Check.

This error is caused by never Hot-Syncing a Check unit to a computer.Â

To bypass a Hot Sync to a computer, there is a function on the Check called: Purge All Deleted.

Â

This option is on the Check's Help menu.Â If you have been deleting un-needed samples all the time, but the unit was never hot-synced to a PC, the "deleted" samples are not permanently removed from memory.Â The Purge function completely removes them from memory.Â

Â

On the Datacolor menu, tap on upper left corner, then tap on Help, Purge All deleted.
