

How to setup a dispenser in a computer to computer configuration?

Before you start, make sure that you have the two computers connected via a Null modem cable. The cable must be connected to com 2 on the Paintmaker PC.

Exit Paintmaker and any other application and place the installation CD for the current version of Paintmaker you are running in the CD rom drive. When the CD autostarts, select *Change Active Dispenser*.

Choose the appropriate manufacturer from the list, choosing either Harbil/Colorpro for the Fluid Management dispensers or Corob for the Corob dispensers.

Then click next.

From the next menu, select Computer to Computer. Select Next.

Files will then be installed and when finished, you will be back at the Windows desktop. The system is ready to dispense formulas.
